

Distributed Systems - Introduction

Duration: 10 minutes.

* Indicates required question

1. Email *

2. Full name *

3. Student ID *

4. If one node fails in distributed system then ____ *

1 point

Mark only one oval.

- ☐ the remaining nodes can continue operating.
- ☐ all the nodes will stop working.
- ☐ directly connected nodes will stop working.

5. Distributed systems must have ____ *

1 point

Mark only one oval.

- ☐ high security.
- ☐ better resource sharing.
- ☐ better system utilization.
- ☐ low system overhead.

6. The characteristics of a distributed system are ____ *

1 point

Mark only one oval.

- ☐ resource sharing, heterogeneity, openness, security.
- ☐ scalability, fault-tolerance.
- ☐ concurrency, transparency.
- ☐ all of the above.

7. When a distributed system hides the presence of multiple copies of a resource, which of the following types of transparency is it providing?

* 1 point

Mark only one oval.

- ☐ Location transparency.
- ☐ Mobility transparency.
- ☐ Access transparency.
- ☐ Replication transparency.

8. A disadvantage of distributed systems is ____ *

1 point

Mark only one oval.

- ☐ resource sharing.
- ☐ incremental growth.
- ☐ reliability.
- ☐ none of the above.

9. The capability of a system to adapt the increased service load is called ____ . *

1 point

Mark only one oval.

- ☐ scalability
- ☐ tolerance
- ☐ capacity

10. All fault-tolerant techniques rely on ____ *

1 point

Mark only one oval.

- ☐ integrity.
- ☐ dependability.
- ☐ redundancy.

11. ____ is bringing back the failed node in step with other nodes in the system. *

1 point

Mark only one oval.

- ☐ Recovery
- ☐ Masking failure
- ☐ Fault tolerance

12. A server halts, but is working correctly until it halts. It is ____ *

1 point

Mark only one oval.

- ☐ crash failure.
- ☐ timing failure.
- ☐ response failure.

13. In distributed systems, network and node failure can be detected by ____ *

1 point

Mark only one oval.

- ☐ heartbeat.
- ☐ polling.
- ☐ handshaking.
- ☐ all of the above.
