

Distributed Systems - Go Packages and Concurrency

Duration: 10 minutes.

* Required

1. Full name *

2. Student ID *

3. *

1 point

Which is the valid import statement in Go?

Mark only one oval.

- ☐ import "github/user/mypackage"
- ☐ import "../mypackage"
- ☐ import "github.com/user/mypackage"
- ☐ All of the above.

4. How can you tell Go to import a package from a different location? *

1 point

Mark only one oval.

- ☐ Change the import path.
- ☐ Use a replace directive in go.mod.
- ☐ Use a replace directory.

5. What does a sync.Mutex block while it is locked? *

2 points

Mark only one oval.

- ☐ Any other call to lock that Mutex.
- ☐ Any reads or writes of the variable it is locking.
- ☐ Any writes to the variable it is locking.

6. What is a channel? *

1 point

Mark only one oval.

- ☐ A medium for sending values between goroutines.
- ☐ A dynamic array of values.
- ☐ A global variable for sharing values between goroutines.

7. Where is the built-in recover method useful? *

1 point

Mark only one oval.

- ☐ Immediately after a line that might panic.
- ☐ Inside a deferred function.
- ☐ At the beginning of a function that might panic.

8. What is the select statement used for? *

2 points

Mark only one oval.

- ☐ Executing a function concurrently.
- ☐ Executing a different case based on the value of a variable.
- ☐ Executing a different case based on which channel returns first.

9. What is a side effect of using time.After in a select statement? *

1 point

Mark only one oval.

- ☐ It blocks the select statement until the time has passed.
- ☐ It is meant to be used in select statements without side effects.
- ☐ It blocks the other channels.

10. How do you tell go test to print out the tests it is running? *

1 point

Mark only one oval.

- ☐ go test --verbose
- ☐ go test -v
- ☐ go test -x
