

Software Architecture - Software Architecture Evaluation

Time: 15 minutes.

* Indicates required question

1. Email *

2. Full name *

3. Student ID *

4. Who are the three main groups of people involved in the architecture tradeoff * 1 point
analysis method?

Mark only one oval.

- ☐ Clients, designers, stakeholders.
- ☐ Evaluation team, project team.
- ☐ Evaluation team, project decision makers, architecture stakeholders.

5. What does architecture evaluation produce? *

1 point

Mark only one oval.

- ☐ A report.
- ☐ Architecture diagrams.
- ☐ Prototype.

6. Scenarios are elicited and prioritized in ATAM using ____.

1 point

Check all that apply.

- ☐ utility trees.
- ☐ structured brainstorming.
- ☐ architecture diagrams.

7. Under conditions of high numbers of users signing on at the same time, there is a potential that one of the architecturally significant requirements (ASRs) will not be met. What is this called? *

1 point

Mark only one oval.

- ☐ tradeoff
- ☐ risk scenario
- ☐ utility shortfall

8. In ATAM, architectural information can be represented using ____.

1 point

Check all that apply.

- ☐ Kruchten's "4+1 views".
- ☐ Requirements specification.

9. An attribute-based architecture style consists of ____.*

1 point

Check all that apply.

- ☐ Problem description.
- ☐ Stimuli/Responses.
- ☐ Architectural style.
- ☐ Analysis.

10. The architecture tradeoff analysis method attempts to precisely predict quality attribute behavior.

* 1 point

Mark only one oval.

- ☐ True.
- ☐ False.

11. The outputs of the ATAM are ____.*

1 point

Check all that apply.

- ☐ risks.
- ☐ sensitivity points
- ☐ tradeoff points

12. Which of the following activities are recommended by the ATAM.*

1 point

Check all that apply.

- ☐ Present the ATAM.
- ☐ Present the business drivers.
- ☐ Present the architecture.
- ☐ Identify architectural approaches.
- ☐ Generate quality attribute utility tree.
- ☐ Analyze architectural approaches.
- ☐ Brainstorm and prioritize scenarios.
- ☐ Analyze architectural approaches with scenarios.
- ☐ Present results.

13. Formal analysis techniques ____.*

1 point

Mark only one oval.

- ☐ are widely available in automated tools.
- ☐ can be applied to UML models.
- ☐ can be used to identify all potential security vulnerabilities in the code.
- ☐ require the model be expressed in the language of the tool.
