

Software Engineering Capstone - Unit Testing

Duration: 10 minutes.

* Indicates required question

1. Email *

2. Full name *

3. Student ID *

4. Where can unit testing be conducted? *

2 points

Check all that apply.

- ☐ UI screens
- ☐ API Endpoints
- ☐ Logic Functions
- ☐ Database Endpoints

5. What are the basic steps to implement unit testing of a logic function? * 2 points

Check all that apply.

- ☐ Select a tool.
- ☐ Install the tool.
- ☐ Generate and modify unit test code.
- ☐ Execute unit test code and generate a report.

6. Why use UI tests? * 2 points

Check all that apply.

- ☐ To automate end-to-end testing.
- ☐ To catch UI regressions during development.
- ☐ To avoid using a simulator or real device.
- ☐ To improve performance of unit tests.

7. What are the basic steps to implement end-to-end unit testing? * 2 points

Check all that apply.

- ☐ Select a tool.
- ☐ Install the tool.
- ☐ Generate and modify unit test code using recorder.
- ☐ Execute unit test code and generate a report.

8. What can we do to guarantee consistent results each time a unit test is run? * 2 points

Check all that apply.

- ☐ Use a script to reset all data before each unit test execution.
- ☐ Remove any data created during unit test execution.
- ☐ Restore any data deleted during unit test execution.
