

Web Application Development - React Components

Duration: 15 minutes.

* Indicates required question

1. Full Name *

2. Student ID *

3. You can declare a JavaScript function to be used as a component in React. *

2 points

Mark only one oval.

☐ True

☐ False

4. You can spread the return statement over multiple lines by surrounding the code that follows the return keyword with an opening and a closing parenthesis. * 2 points

Mark only one oval.

- ☐ True
- ☐ False

5. Is this valid component code? * 2 points
- function Example() { return (<h1>Example</h1>) }**

Mark only one oval.

- ☐ Yes
- ☐ No
- ☐ It would be valid, if it was spread over multiple lines.

6. When you are working with lists in JSX, you can return a React component. What is the purpose of curly braces in this process? * 2 points

Mark only one oval.

- ☐ To store the result of the transformation being performed.
- ☐ To loop through the array of initial data.
- ☐ To access the needed properties from the initial data.
- ☐ To access the content of the variable that represents your list item.

7. How do you access dynamic data inside the JSX from the render function? *

2 points

Mark only one oval.

- ☐ Using local state in the component.
- ☐ Using component props.
- ☐ Wrapping the variable in question with curly braces.
