

Web Application Development - fetch Function

Duration: 15 minutes.

* Indicates required question

1. Full Name *

2. Student ID *

3. Which of the below statements is an accurate description of JavaScript utilizing the fetch function? *

1 point

Mark only one oval.

- ☐ When JavaScript uses the fetch function it is performing each step of the process one by one, carrying out all of the required duties. This is known as asynchronous JavaScript.
- ☐ When JavaScript uses the fetch function it is delegating duties to an external API so that it can continue its process. This is known as asynchronous JavaScript.
- ☐ When JavaScript uses the fetch function it is delegating duties to an external API so that it can continue its process. This is known as single-threaded execution.
- ☐ When JavaScript uses the fetch function it is performing each step of the process one by one, carrying out all of the required duties. This is known as single-threaded execution.

4. Which of the statements below best describes how the fetchData function is working? *

1 point

Mark only one oval.

- ☐ The fetchData function is initially fetching data from the [example.com](#) API, next it retrieves a response from the API in JSON format, and finally updates the state variable with the returned data.
- ☐ The fetchData function is initially fetching data from the [example.com](#) API, next it retrieves a response from the API in JSON format, and finally returns the data as the output.
- ☐ The fetchData function is initially fetching data from the [example.com](#) API, next it retrieves a response from the API in text format, and finally updates the state variable with the returned data.

5. When invoking the fetch() function to get some JSON data from an API, you should pass it a URL. *

1 point

Mark only one oval.

- ☐ True
- ☐ False.

6. After invoking the fetch() function, you need to add a call to the then() function. *

1 point

Mark only one oval.

- ☐ True
- ☐ False.

7. Choose the right way to handle the response from a fetch call. *

1 point

Mark only one oval.

- ☐ `then( response => response.json())`
- ☐ `then( response => json() )`
- ☐ `then( json => response() )`
